DESCRIPTORS: *Sulfuric acid, Separation, *Petroleum, Oil, Processing, Recovery, Electrolysis.

It was established that sulfuric acid can be reclaimed from acid sludge or black acid by electrolytic means. The concentration of the obtained acid can be raised to 92% by evaporation before or after the electrolytic treatment. The color of the finished acid is also quite satisfactory, and when determined with a Duboscq apparatus it ranges from 5.3 to 29.3 mm. Technical sulfuric acid, the color of which was determined at the plant to be 45.1 mm, showed a very small content of

Trans. of Veterinariya (USSR) 1955 [v. 32] no. 2, p. 38-42.

Transfusion of maternal blood, which is assumed to contain compatible proteins as well as antibodies, has been used consistently at the Bryansk collective farms since 1949 for prophylaxis of paratyphoid and coliform bacillus infections in calves. Blood transfusion has undoubted advantages over serum injection. Transfusions of maternal blood were used effectively, alone or in conjunction with other therapeutic agents, in treatment of digestive disorders, diseases of the respiratory system, and coliform bacillus and paratyphoid infections. Transfusions had little effect on calves suffering from vitamin A deficiency.
